Project Title: Star Wars

Star Wars website

I'm interested in making this site a map-location kind of website where I have a galaxy (as per Star Wars' theme) with pinned points one can hover over or click to open for information. Once one clicks on a section, there can also be an option to zoom in and expand the information. The sections should be coherently organized so that one thing leads to another naturally and can be simple enough to follow and find. There's so much content to pull from, so I'm sure there'll be ways to use design in unique ways for each thing.

1. Star Wars Intro/Base Info/Premise
2. History of Star Wars Media
3. Timeline of Star Wars + Major events in chronological order
4. (Breakdown of Important Characters & Concepts (+connections between them) -- The Force, Anakin Skywalker/Darth Vader, Han Solo, Padme Amidala, Chewbacca, Obi Wan Kenobi, R2D2, C3PO, Emperor Sheev Palpatine, Luke Skywalker, Leia Organa, Darth Maul, General Grievous, Clone Captain Rex, Clone Commander Cody, Yoda, Ahsoka Tano, The Jedi Council, The Separatists, The Empire, important planets (5-7 maybe?), The Trade Federation, The Rebels, The Death Star)
5. Films - Original Trilogy, Prequel Trilogy, Sequel Trilogy, Other stand-alone films & upcoming films
6. Television - Animated Series/Live-action Series
7. Other Media - Video games/Novels/literature/Graphic Novels/Music
8. Cultural Impact - Information about the Industry/Fandom/Academia surrounding Star Wars
9. More Information -- links to Wikipedia page, fandom page, etc.
